

CIS selects Maple Tech for insurance program backbone

27th February 2007

By Staff Writer

CIS Insurance Group has completed the transition of its underwriting operations to Maple Tech's Aspire policy management information system for its tribal Indian nation insurance business program.

CIS Insurance Group is the national administrator for the Program for Sovereign Indian Nations, which offers insurance protection for tribal Indian nations throughout the US. Comparable to a municipal-level type program, CIS provides coverage to tribal governments covering a variety of insurance exposures resulting from diverse tribal operations, including gaming, as well as tribal government agencies, such as school systems and local law enforcement agencies.

CIS chose Maple Technologies' Aspire Information System to support this niche insurance program. Aspire offers CIS a web-based real-time information system interface that addresses 27 different lines of business across more than 35 US states, as well as statistical reporting functions for the Colorado program administrator.

Through a single application interface, Aspire supports single-step multiple policy processing, premium accounting, and fully automated daily statistical reporting for both admitted and surplus lines transactions written through the program.
